title=xx

• title=xx代表设置折线图的标题为xx,如下图所示:

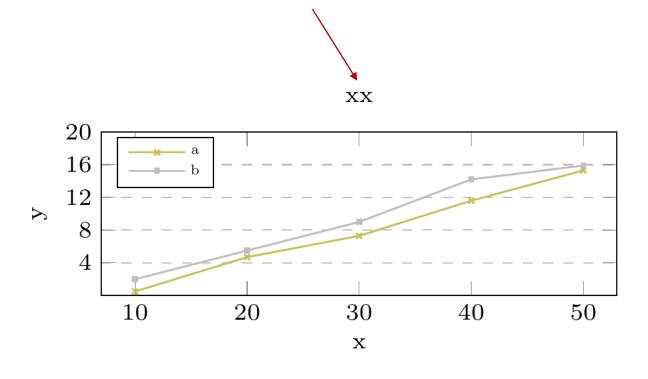

Figure 1: xxxx

width=7cm, height=3.3cm

• width=7cm, height=3.3cm代表调节整个图形的宽度和高度,如下图所示:

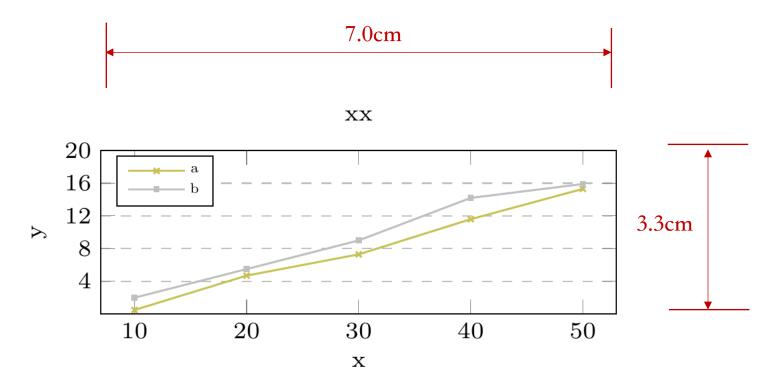

Figure 1: xxxx

xtick={1, 2, 3, 4, 5}, xticklabels={10, 20, 30, 40, 50}

• xtick用于指定x轴刻度值,如果为空,则自动设置刻度线, xticklabels用于指定x轴刻度标签(y坐标轴同理可以使用ytick和 yticklabels),如下图所示:

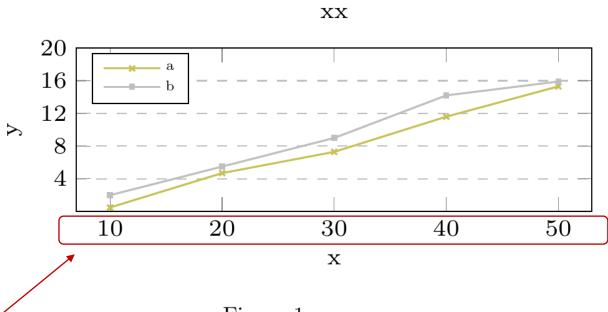

Figure 1: xxxx

grid style=dashed

• grid style用于设置网格线格式,设置为dashed表示网格为虚线,如下图所示:

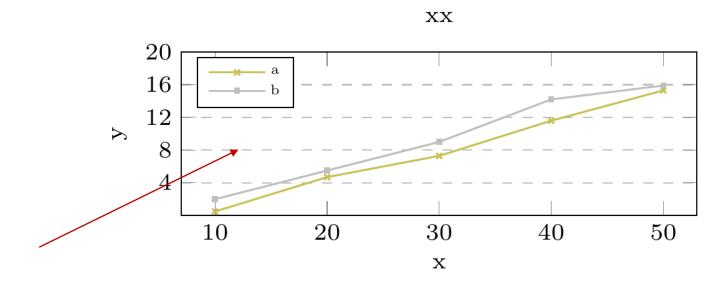

Figure 1: xxxx

\addplot+[semithick,mark=x,mark options={scale=0.6}, olive!50!white] plot coordinates { (x,y) }

• semithick设置折线的粗细为0.6pt, mark是折线标示形状, options 是mark形状的大小, olive!50!white是颜色, coordinates中包含要绘制的点的坐标,如下图所示:

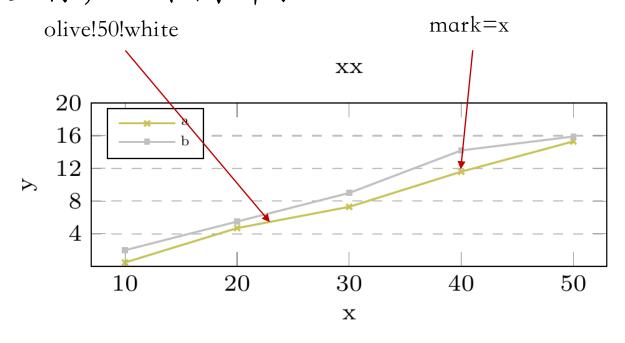

Figure 1: xxxx
